

CONTACT MOBILE

The basic version of CONTACT works perfectly with the latest Tablet hardware on the market today with Phone compatibility soon to follow. License fees starting as low as \$50/device.

CONTACT STANDARD

Includes all of the features in the Mobile version with additional Activities available for Tabletop and Display installations. Ability to attach additional sensors for increased functionality.

CONTACT MULTIUSER

Includes Standard Package with additional features to support multi-user tables and wall environments. Configure the software to work with 1 user or 4+ users. Software allows users to run multiple Activities at the same time.

CONTACT MODULES

Select specific modules based on your industry to increase the attractiveness of your solution. Let CONTACT do the work for you. The Healthcare module is available now. Additional modules coming soon!

CONTACT™ Multitouch Development Software

Reactive Technologies makes interaction with computers easier and more enjoyable through its innovative multitouch software suite named CONTACT™. CONTACT™ allows companies to begin replacing the single touch technologies of yesterday with dynamic, innovative multitouch devices.

Reactive's software provides developers and end users a natural means of interaction with computers. CONTACT™ is compatible with all of the latest Windows devices and provides additional Activities for use in numerous industries.

TOP FEATURES

- CONTACT processes all touch events and gestures for your application
- Create multiple "Activities" or applications that run simultaneously
- Integrate existing Windows 7/8 programs into a Multitouch environment
- Database services available – Local, LAN, or Cloud
- API documentation available with sample code to help reduce integration time
- Software runs on Tablets, Kiosks, Displays, or Multi-User Tables
- Software works with multiple hardware manufacturers' devices ranging from 7" to 100" in size
- Resized, rotate, and flip Activity windows independently at user direction
- SDK Touch kit available with custom touch controls built specifically for Touch
- Data can be sent between Activities or to a database at any time
